

Part 2, Attachment 6.

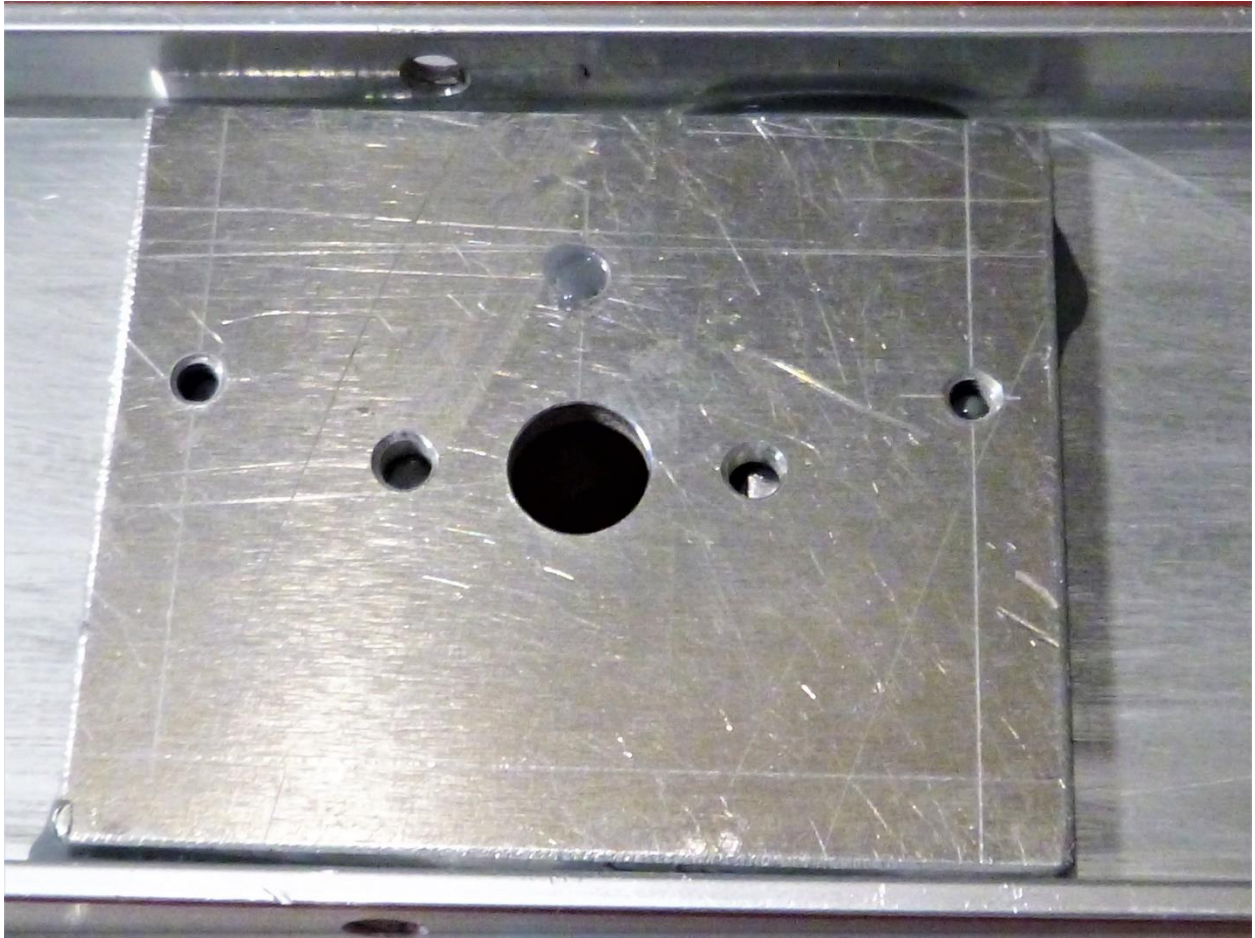

Layout and Drilling for the Volume Pot in the Front Panel

Wall of Sound.ca Tubelab DIY EL84 Amp

I found a few pictures that were taken of the volume pot mounting plate in the prototype. This should enlighten, or at least make slightly clearer, the text at the end of Part no. 2, attachment 5.

The 1/8" (or 3mm) plate used to mount the volume pot is shown just above the front plate. Both have been sanded lightly to give the epoxy used to stick them together a better grip. Note: There are 3 extra holes in the pot mounting plate not shown on the drawing in attachment 5. They are not required. This was a scrap piece and the extra holes were pre-existing.

Epoxy applied and hole in plate aligned to hole in front panel. Set this assembly aside for several hours to give the epoxy a chance to fully cure.
